Enquire™

Connect Enquire to your Financial Management System

Streamline your project budget, administration and management by connecting Enquire to your financial system and automating payments.

Improve financial management and reduce your administrative overheads with automations that ensure payment processes and tracking are efficient, secure and compliant with your contractual obligations.

Deliver accurate reporting with up-to-date budget information to support better financial decision-making.

BOOK A PERSONALISED DEMO

Schedule Payments
Payment milestones are added to individual projects by project managers or can be automatically scheduled based on your business processes.

Automate Payments
Milestones are then paid by project managers based on your organisation's payment approval process, generating an invoice.

Create Batches
Manually bundle payments in batches for approval or have automated jobs that can create batches on a schedule.

Approve Batches
Next, review the invoices removing any that are invalid, before approving the batch and sending it to your financial system.

Reconcile Batches
Once processed in your financial system, reconcile payments in a batch between Enquire and your financial system. Deal with any exceptions prior to completing the reconciliation.
