

Share insights with Power BI visualisations

Scenario

Non-profit organisations in the education sector use Enquire for managing their scholarship programs. They require a robust solution to analyse, visualise, and share data insights with their internal teams and external stakeholders, like donors and board members.

Solution

Leveraging Power BI connected to the Enquire Reporting Warehouse, the organisation creates and shares interactive dashboards to present their data insights securely.

Implementation

Data Preparation in Enquire Reporting Warehouse

The Enquire Reporting Warehouse stores comprehensive data on scholarship applications, disbursements, applicant demographics, and program outcomes.

Dashboard Creation in Power BI

Analysts at the organisation use Power BI to connect to the Enquire Reporting Warehouse. They create interactive dashboards that visualise key metrics such as application trends, success rates, and demographic breakdowns.

Secure Sharing and Access Control

The dashboards are published to Power BI Workspaces, where access is strictly controlled. Internal teams are granted editing rights, while external stakeholders like board members receive view-only access. For external stakeholders, dashboard sharing is done through Power BI's secure sharing features, ensuring data remains confidential and access is revocable.

Business Value

Enhanced Data-Driven Decision Making

The dashboards provide deep insights into the effectiveness of scholarship programs, helping the organisation make informed decisions.

Increase Transparency

Securely shared dashboards ensure donors and board members are kept informed about the program's impact, fostering trust and continued support.

Operational Efficiency

The ability to quickly create and update dashboards saves time and resources, reducing the reliance on manual reporting processes.

Customised Access Control

Different levels of access ensure that sensitive data is only visible to authorised personnel, maintaining data security and privacy.

Outcome

- Efficiently interrogate your data for rich insights to enable informed decision-making
- Visual dashboards that can be shared with stakeholders securely to communicate impact easily
- Dynamic data visualisation enables you to stay up-to-date of insights without effort
